	SEGRET 25X1
	****Z****
	11 April. Between 4 and 6 p.r. 24 thin-engine plane: and
	four biplanes at the field. Not all of the
Г	planes at the field were marked by the red and yellow code of arms on a red back-ground, which was previously seen painted on the noses of aircraft.
_	five or six 15-minute flights were made.
	15 April. Two biplanes practiced night flying after 8 p.m.
	16 April. There was night flying by biplanes.
•	24 April 25 or 26 twin-engine planes, 3 biplanes and 1 high-win monoplane at the field. There was flying in the night of 24 - 25 April.
	25 April. Li-2s parked in
	the northwestern corner of the field.
	27 April. From meon to 1 p.m., there was light flying by twin-engine planes,
, [-	
1	
7.	Between 2 and 6 p.m. on 8 April, two twin-engine planes left the field. About 8 p.m. on 21 April, a twin-engine and a four-engine plane landed at the field in short succession. 4 There was flying from 10 a.m. to 6 p.m. on 22 April.
3. [
Ĺ	Comment. An air transport regiment and probably transport and courier planes of the GOFG are stationed at Schoenefeld airfield which is also used by commercial airlines.
s.£	Comment. The
L	plane is a light transport of type An-2. However, the two wings of this type of plane are not braced by V but I struts.
3.	
_ 4□	Comment. The type of this four-engine plane cannot be determined. Re-
٠	ference is made in this connection to a four-engine plane seen over Schoene-
	feld in April 1953. From photographs taken of this craft it was believed to be a B-17.
